

Information Technology Partners - 3/01 to 1/02

Consulted on the Emerging Services Billing System for AT&T. This Kenan Arbor BP biller was responsible for all of AT&T's new offerings in the digital IP area including DSL, Broadband, VPN, MIS, and Optical Carrier. Developing adjunct software using C, C++, Arbor API, and Sybase CTLIB, to automate the creation and configuration of complex services, packages, and discounts. These new programs supplemented the use of Lucent's ATM (Arbor Table Maintenance) and helped eliminate the manual data entry which is tedious, time consuming, and error prone. Also automated different aspects of the testing process.
